

## Toward AI Analytical Chemistry

## Quantitative *in silico* Analytical Chemistry

### Contents

#### Fundamentals

1. Introduction	1
2. Construction of molecules using computational chemistry program	3
3. LC1 Modeling graphitized carbon-phase	6
4. LC2 Selectivity of graphitized carbon-phase	10
5. GC1 Methyl-silicone-phase and the selectivity	16
6. GC2 Boiling point and enthalpy	24
7. GC3 Ethylene glycol-phase and the selectivity	27
8. GC4. 50% phenylmethyl-phase and the selectivity	30
9. Retention mechanisms in normal-phase liquid chromatography	39
10. Retention mechanisms in hydrophilic interaction liquid chromatography	43
11. Retention mechanisms in Ion-exchange liquid chromatography	46
12. LC6 Solvent effect 1	49
13. LC7 Solvent effect 2	54
14. Titration analysis 1. Indicator phenolphthalein color change	58
15. Titration analysis 2. Indicator sulfonephthalein color change	61
16. Titration analysis 3. Indicator methyl-orange and methyl-red color change	64
17. Colorimetric analysis of Hydrochlorothiazide and Creatinine	69
18. NMR spectroscopic determination of chemical structures	71
19. Chemiluminescence mechanisms and absorption detection mechanisms of bromate in ion-chromatography	75
20. Preparation of model silica gels	80
21. Preparation of model solvent phases	84
22. Preparation of model silica gels 2 and behavior of phenolic compounds	88
23. Reversed-phase liquid chromatography for acidic and basic drugs	93
24. Selectivity of hexenyl and phenylhexyl-phases for RPLC	99
25. structure of saccharides and chromatography	103
26. Bio-mimic ion-exchange groups and chromatography	106
27. Albumin-drug binding affinity ( $\log nK$ )	110
28. Chromatographic enantiomer recognition mechanisms 1	112
29. Chromatographic enantiomer recognition mechanisms 2	118

#### Applications

30. Quantitative analysis of enzyme reaction 1 Alcohol dehydrogenase	123
31. Quantitative analysis of enzyme reaction 2 Cinnamyl-alcohol dehydrogenase ELI3-2	130
32. Quantitative analysis of enzyme reaction 3 Alanine racemase	133
33. Quantitative analysis of enzyme reaction 4 Human serine racemase	137
34. Quantitative analysis of enzyme reaction 5 Human D-amino acid oxidase DAO	141
35. Quantitative analysis of enzyme reaction 6 Human acidic D-amino acid oxidase DDO	146
36. Quantitative analysis of SARS-CoV-2 variants transmissibility	153
37. Quantitative analysis of SARS-CoV-2 S-RBD and ACE-2 docking inhibitors	157
