STARTING SALARIES 1982

Analysis of the
American Chemical Society's
Survey of Graduates in
Chemistry and Chemical Engineering

Manpower Studies
American Chemical Society
Washington, D.C.

ACS OFFICE OF MANPOWER STUDIES PUBLICATIONS

Salaries: The Office of Manpower Studies annually surveys the ACS membership, gathering detailed information on member chemists and chemical engineers. The reports based on this survey contain statistical tables describing the respondents' employment status, employer, work function and specialty, salary and geographic and other demographic characteristics.

Reports are available for each year from 1973 to 1982.

Starting Salaries: The Office of Manpower Studies also surveys new graduates in chemistry and chemical engineering each year, and publishes reports detailing the graduates' employment status, post-graduation plans, starting salaries and other employment and demographic characteristics.

Reports are available for each year from 1975 through 1982.

Professionals in Chemistry: The Professionals in Chemistry series compiles information concerning chemists and chemical engineers from ACS, government, and private industry sources. It details information on demography, employment, salaries, education, and supply and demand, for the entire chemical profession.

Reports for each year from 1975 through 1978, and a combined report for 1979-1980, are available.

Special Reports:

1975 Report of Chemists' Salaries and Employment Status Supplement: Economic Status of Women in the ACS.

Women Chemists 1980: A supplemental report on the ACS's 1980 Survey of Salaries and Employment.

Computers in Chemical Research: A Survey of the Use of Computers by Chemists at U.S. Universities (1980).

ACKNOWLEDGMENTS

Each year the American Chemical Society surveys chemistry and chemical engineering graduates to determine trends in starting salaries and employment status, at the direction of the Society's Committee on Economic Status. John Robert Jones, Harry Foxwell, and Sandy Schowgurow of the Office of Manpower Studies conducted this year's survey and prepared this report.

Robert K. Neuman, Head
Department of Professional
Relations and Manpower Studies

SUMMARY OF FINDINGS

SALARIES

Starting salaries for inexperienced BS chemists remained at their 1981 level, ending more than a decade of year-to-year increases. Starting salaries increased for new MS and PhD chemists, and for new chemical engineers at all three degree levels.

Inflation's effect on starting salaries has moderated this year. During the year from August 1981 to August 1982, the official consumer price index increased only about 6%, whereas prices had increased about 11% one year earlier and 13% two years earlier.

Table 1 on page 2 shows average starting salaries paid to inexperienced chemistry graduates for 1981 and 1982, and gives additional information concerning the variation among individual salaries within each group. Table 2 on page 3 presents corresponding information for chemical engineering graduates.

For inexperienced chemists, 1982 mean starting salaries were

$17,303 for the BS, unchanged, or in constant dollars down 5.9%
$22,758 for the MS, up 13.2%, or in constant dollars up 6.9%
$30,742 for the PhD, up 7.6%, or in constant dollars up 1.6%

Chemical engineers continue to receive larger starting salaries than do chemists with similar degrees. Among chemical engineers the 1982 mean starting salaries were:

$26,352 for the BS, up 8.3%, or in constant dollars up 2.3%
$28,832 for the MS, up 10.1%, or in constant dollars up 4.0%
$34,634 for the PhD, up 11.6%, or in constant dollars up 5.4%

POST-GRADUATION EMPLOYMENT STATUS

Contrary to what the increased starting salaries for BS chemical engineers might seem to imply, this year many are unemployed. The number not employed but seeking employment has increased dramatically, from 7% in 1981 to more than 22% in 1982. A contributing factor to this increase in unemployment is the large number of new graduates in chemical engineering. Table 3 on page 5 summarizes the post-graduation plans of the graduates responding to the survey.

ADVANCED STUDY PLANS and POSTDOCTORAL FELLOWSHIPS

The percent of new chemistry PhD's accepting post-doctoral appointments remains at about 30 percent. Advanced study plans of 1982 graduates, summarized in Table 4 on page 6, show no major changes from 1981 figures.

Table 1

STARTING YEARLY SALARIES OF INEXPERIENCED FULL-TIME EMPLOYED CHEMISTRY GRADUATES

by Degree: Summer 1981 and Summer 1982

Salaries	DEGREE LEVEL					
	Bachelor's		Master's		Ph.D.	
	1981	1982	1981	1982	1981	1982
90th Percentile	$21,600	$23,000	$25,200	$27,000	$31,960	$35,000

Standard Deviation	2,249	2,953	1,995	2,903	4,890	3,276

CERTIFIED GRADUATES

"Certified graduates", i.e., graduates completing undergraduate chemistry programs approved by the ACS's Committee on Professional Training, generally received higher starting salaries than non-certified graduates (see table A-10, page 25). One third of all BS chemistry graduates responding to the survey planned to study medicine. More than 70 percent of those studying medicine were non- certified (see table C-5, page 44). There was no difference in the unemployment rates for certified and non-certified graduates.

INTERPRETING SURVEY RESULTS

The numbers contained in these tables are estimates, derived from a sample rather than from a complete census. Thus, although they are the best estimates available, they are imperfect. Reasonable caution will prevent rash interpretations. An example of an estimate that demands caution is the difference between men's and women's salaries. Among inexperienced master's level chemical engineers, men had greater mean salaries than did women, but the difference is small and is not enough to support a statement that the mean for all men, including those not in the sample, is greater than that for all women. The technical notes give some guidance as to the degree of precision associated with various statistics in this report.

Table 3

POSTGRADUATION STATUS OF CHEMISTRY AND
CHEMICAL ENGINEERING GRADUATES: SUMMER 1982

Major and Employment Status	Bachelor's	Master's	Doctorates
CHEMISTRY			
Full-time employed:			
In chemistry or chemical engineering	24.0%	52.7%	62.9%
Outside chemistry or chemical engineering	8.7	5.9	3.2
Postdoctoral/grad. asst./other fellowship	25.7	26.0	30.7
Unemployed and seeking full-time employment	13.0	5.5	2.2

Total	100.0	100.0
Number of responses	234	265

SCOPE AND METHOD

OBJECTIVES

The 1982 Starting Salary Survey is the 31st in the series of annual surveys now conducted by the Office of Manpower Studies of the American Chemical Society. Summaries of the results of these surveys appear annually in the "Chemical Careers" edition of the Chemical and Engineering News, this year published on October 18.

The primary objective of the survey is to gather data on the starting salaries and occupational status of new chemists and chemical engineers who graduated during the 1981-82 academic year. The survey covers bachelor's, master's, and doctoral degree recipients. In addition, the survey provides information on graduates' sex, citizenship, and minority classification.

METHOD OF COLLECTION AND TIMING OF SURVEY

Chemistry and chemical engineering departments provided names and addresses of students who graduated between July 1, 1981 and June 30,1982. The cooperating departments were the chemistry departments approved by the ACS and the chemical engineering departments approved by the American Institute of Chemical Engineers and the Engineer's Council for Professional Development.

During the summer of 1982, the Office of Manpower Studies mailed questionnaires to those graduates who had U.S. addresses and graduation dates from July, 1981 through June, 1982.

EXTENT OF COVERAGE

Survey questionnaires were mailed between July 26 and August 20 to approximately 14,000 graduates.* By the cutoff date of September 24, the Office of Manpower Studies had received 4,727 usable responses.

The table below contains estimates of the numbers of chemistry and chemical engineering graduates in 1982.

Projected Numbers of Degrees in
Chemistry and in Chemical Engineering, 1981-1982

	Bachelors	Masters	Doctorate
Chemistry	12,120	1,820	1,540
Chemical Engineering	7,320	1,280	317

* About 9,000 questionnaires were sent by first class mail, the remaining 5,000 by bulk mail. About 300 of those sent first class were returned because of insufficient addresses. Past experience indicates that about 90% of those sent by bulk mail reached the graduates.

The survey respondents represent about 18.0 percent of all 1982 chemistry graduates and about 18.0 percent of all 1982 chemical engineering graduates. No effort was made to examine the characteristics of graduates from departments that did not participate in the survey or of those graduates who did not mail back completed questionnaires.

DEFINITIONS

The questionnaire appears at the end of this report. Reponses to questions on post-graduation status were edited to eliminate multiple responses and to reflect as accurately as possible the employment status of the respondent.

The term "inexperienced" as used in the tables refers to those who have 12 months or less of prior professional work experience. Salary tables are based only on salaries of those who found full-time employment in chemistry or chemical engineering. Postdoctoral salaries are analyzed separately.

The Technical Notes present methods for estimating sampling error and also explain certain discrepancies among some of the tables.

TECHNICAL NOTES

DISCREPANCIES AMONG TABLES

Some pairs of tables contain totals that should be identical but are not. For example, two tables that present information about PhD respondents should show the same total number of PhDs. They might, however, show different totals. To illustrate, if one table groups the PhDs according to sex and the other groups them according to geographic region, the totals will differ unless the number who did not indicate their sex is the same as the number who did not indicate their geographic region.

ESTIMATES OF MEDIAN SALARIES

Median salaries displayed within the cells of the salary tables are sample medians and are therefore subject to sampling error. This error may be quite large, especially when the number of respondents in the corresponding cell is small. Therefore, median salaries in cells with fewer than 15 respondents should not be used to estimate their corresponding population medians. Similarly, tables showing the 25th and 75th salary percentiles, and those showing the 10th and 90th salary percentiles, should have at least 25 respondents and 40 respondents respectively.

COMPARING SALARIES

Often questions arise concerning women's salaries as compared with men's, or chemists' salaries as compared with chemical engineers'. These and similar comparisons require caution.

Statistical tests should be performed to determine whether observed differences in salaries of various sample groups could be mere chance occurrences resulting from peculiarities of the samples. Whether a difference in salaries is "statistically significant" depends not only on the magnitude of the difference but also on the sample sizes and the magnitudes of the sample standard deviations.

Statistical tests of significance may be found in Numerical and Statistical Techniques, by J. H. Pollard, Handbook of Tables for Probability and Statistics, published by the Chemical Rubber Company, and in other similar texts.

ESTIMATING SAMPLING ERROR FOR PERCENTS

Percents in this report are derived from the sample. If the entire population had received and returned questionnaires, most estimates would

be somewhat different. How much different? Although this question does not have an exact answer, the table below does provide some guidance. To use the table, find the column headed by the percent (p) derived from the sample, and find the row appropriate for the sample size (n). (Approximations for p and n may be used.) Note the number in that column and that row of the table.

This number from the body of the table measures the precision with which the sample percent estimates the percent of the entire population. Specifically, if this procedure is applied repeatedly, about 95 times out of 100 the population percent will differ from the sample percent by no more than the amount shown in the table.

Approximate Sampling Errors for Percents

n	p= 10% or 90%	p= 20% or 80%	p= 30% or 70%	p=40% or 60%	p= 50%
50	8.3%	11.1%	12.7%	13.6%	13.9%
100	5.9	7.8	9.0	9.6	9.8
200	4.2	5.5	6.4	6.8	6.9
500	2.6	3.5	4.0	4.3	4.4
1000	1.9	2.5	2.8	3.0	3.1
2000	1.3	1.8	2.0	2.1	2.2
5000	0.8	1.1	1.3	1.4	1.4
10000	0.6	0.8	0.9	1.0	1.0

In Table B-1 (page 32) for example, 258 respondents classified as chemists indicated their highest degree as PhD, and their employment status as employed full-time in chemistry or chemical engineering. The percent of this group who are women is listed at 13.6 percent (p=13.6). A "95% confidence interval" for this percent may be approximated by taking n and p to be about 200 and 10%. The table shows an approximate sampling error of 4.2%. Hence, the 95% confidence interval is 9.4% to 17.8%. If 100 similar estimates were made at this "level of confidence," about 95 of the true population percents would be contained in their respective intervals.

American Chemical Society

OFFICE OF THE
EXECUTIVE DIRECTOR

1155 SIXTEENTH STREET, N.W.
WASHINGTON, D.C. 20036
Phone (202) 872-4600

Summer 1982

Dear Colleague:

For many years the American Chemical Society has been gathering information about starting salaries in chemistry and chemical engineering, by means of an annual mail survey of both member and nonmember graduates. We believe the data gathered has been very useful to chemists and chemical engineers, particularly as they start their careers, and that the publication of such data has a beneficial effect on salary levels. Also, the surveys provide information on the employment status of recent graduates. These surveys by the Society have gained a reputation for reliability and usefulness.

We urge you to participate in this survey as a service to your colleagues and profession. Please take a few moments now to fill out the enclosed questionnaire. No personal identification is required; the returns should be anonymous.

Please complete as many items in the questionnaire as possible, whether or not you have already accepted employment, and return it as soon as you can. We have enclosed a postage-paid envelope for this purpose.

A report on last year's starting salary survey was published in the CHEMICAL AND ENGINEERING NEWS Careers Issue (October 19, 1982, pp. 57-58). CHEMICAL AND ENGINEERING NEWS will publish a similar report in the fall of this year.

We thank you for your help and extend our very best wishes for every success in your professional pursuits.

Sincerely yours,

Raymond P. Mariella

Raymond P. Mariella

AMERICAN CHEMICAL SOCIETY

Survey of Starting Salaries and Employment Status of
1982 Chemistry and Chemical Engineering Graduates

A. Highest degree earned (Check one.): Bachelors 1[] Masters 2[] Doctorate 3[]

B. Field of highest degree (Check one):

Chemical engineering	1[]	Organic chemistry	7[]
Chemistry, general	2[]	Pharmaceutical/medicinal/clinical chemistry	8[]
Biochemistry	3[]	Physical chemistry	9[]
Agricultural/food chemistry	4[]	Theoretical chemistry	10[]
Analytical chemistry	5[]	Polymer/macromolecular chemistry	11[]
Inorganic chemistry	6[]	Chemistry, other	12[]
		Non-chemical	13[]

C. Do you plan further advanced studies in fall 1982? (Check one):

Yes, full time 1[] Yes, part-time 2[] No 3[] ——→Go to Question E.

D. Field of further studies (Check one):

Chemistry	1[]	Dentistry	8[]
Other physical science, or math.	2[]	Pharmacy, pharmacology	9[]
Chemical engineering	3[]	Business management	10[]
Other engineering	4[]	Education	11[]
Biochemistry	5[]	Law	12[]
Life science	6[]	Social science, or humanities	13[]
Medicine	7[]	Other	14[]

E. Age: _____

F. Sex: Male 1[] Female 2[]

G. Citizenship or visa status (Check one):

U.S. citizen 1[] U.S. permanent resident visa 2[] Other visa 3[]

H. Racial or ethnic group:

Black (not of Hispanic origin)	1[]
American Indian or Alaskan Native	2[]
Asian or Pacific Islander (of Chinese, Japanese, Korean, Filipino, or Subcontinental Indian origin)	3[]
Hispanic (of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish origin)	4[]
White (not of Hispanic origin)	5[]

I. Post-graduation employment status (Check one):

Accepted or continued full-time employment (excluding summer employment):

In a field of chemistry or chemical engineering	1[]
In a field other than chemistry or chemical engineering	2[]
Accepted a graduate assistantship or a postdoctoral or other fellowship	3[]

Not employed (or employed part-time or for the summer):

and seeking full-time employment	4[]
and not seeking full-time employment	5[]

——→ Please stop. Return the questionnaire in envelope provided.

J. Professional or technical work experience prior to graduation (Check one):

Less than 12 months (or none). 1[] 12 to 36 months. 2[] More than 36 months. 3[]

K. How long have you been working for your current employer?

12 months or less. 1[] More than 12 months. 2[] ——→Go to question M.

L. How many firm offers of employment did you receive in a field of chemistry or chemical engineering? Specify number _____

M. Employer classification (Check the one category which best describes your employer):

Private industry or business:
Manufacturing

Chemicals	1[]	University granting a doctorate in chemical science	11[]
Coatings	2[]	Other college or university	12[]
Food	3[]	High school or other school	13[]
Metals, minerals	4[]	Federal government (civilians only)	14[]
Paper	5[]	State and local government	15[]
Petroleum	6[]	Hospital or independent laboratory	16[]
Pharmaceuticals, personal care	7[]	Other non-profit organization or research institute	17[]
Rubber	8[]	Other	18[]
Other manufactures	9[]		
Non-manufacturing (e.g. mining, utilities, construction, etc.)	10[]		

N. Annual salary: $ _____ per year

O. Geographic location of employment: State _____

Please return within 7 days to the American Chemical Society
Room 202, 1155 Sixteenth St. N.W., Washington, D.C. 20036

Thank you.
