## PUBLICATIONS OF ACS STATISTICAL SERVICES

Salaries: ACS Statistical Services annually surveys the ACS membership, gathering detailed information on member chemists and chemical engineers. The reports based on this survey contain statistical tables describing the respondents' employment status, employer, work function and specialty, salary and geographic and other demographic characteristics.

Reports are available for each year from 1973 to 1983.

Starting Salaries: ACS Statistical Services also surveys new graduates in chemistry and chemical engineering each year, and publishes reports detailing the graduates' employment status, post-graduation plans, starting salaries and other employment and demographic characteristics.

Reports are available for each year from 1975 through 1983.

Professionals in Chemistry: The Professionals in Chemistry series compiles information concerning chemists and chemical engineers from ACS, government, and private industry sources. It details information on demography, employment, salaries, education, and supply and demand, for the entire chemical profession.

Reports for each year from 1975 through 1978, and a combined report for 1979-1980, 1981-1982 are available.

### Special Reports:

1975 Report of Chemists' Salaries and Employment Status Supplement: Economic Status of Women in the ACS.

Women Chemists 1980: A supplemental report on the ACS's 1980 Survey of Salaries and Employment.

## ACKNOWLEDGMENTS

Each year the American Chemical Society surveys chemistry and chemical engineering graduates to determine trends in starting salaries and employment status, at the direction of the Society's Committee on Economic Status. John Robert Jones, Sandy Schowgurow, and Nguyen Bailey of ACS Statistical Services conducted this year's survey and prepared this report.

Robert K. Neuman, Head  
Department of Professional Services

## SUMMARY OF FINDINGS

### SALARIES

Starting salaries for inexperienced BS chemists continue to be a disappointment. After more than a decade of steady increases, in 1982 salaries for fledgling chemists held steady at their 1981 level, and now they actually show a slight decrease. Furthermore, inflation hastens the deterioration in the buying power of those entering the profession as BS chemists.

In contrast, chemists with advanced degree face a somewhat more encouraging labor market. For inexperienced chemists who have just received the master's degree the mean salary rose enough to cause a slight increase in buying power. And for new doctoral chemists the increase in salaries at least kept buying power at the same level as 1982.

Although chemical engineering graduates at all three degree levels continue to enjoy salaries larger than those of chemists, in one way this year's labor market was even more of a let down for chemical engineers than for chemists. Not only did salaries for inexperienced BS graduates decrease, but those for MS recipients also slipped. These decreases come after more than ten years of steady increases.

Table 1 shows average starting salaries paid to inexperienced chemistry graduates for 1982 and 1983, and gives additional information concerning the variation among individual salaries within each group. Table 2 presents corresponding information for chemical engineering graduates.

For inexperienced chemists, 1983 mean starting salaries were

\$17,044 for the BS, down 1.5%, or in constant dollars down 4.0%  
\$24,009 for the MS, up 5.5%, or in constant dollars up 2.9%  
\$31,613 for the PhD, up 2.8%, or in constant dollars up 0.3%

Chemical engineers continue to receive larger starting salaries than do chemists with similar degrees. Among chemical engineers the 1983 mean starting salaries were:

\$25,281 for the BS, down 4.1%, or in constant dollars down 6.5%  
\$28,392 for the MS, down 1.5%, or in constant dollars down 4.0%  
\$36,476 for the PhD, up 5.3%, or in constant dollars up 2.7%

Table 1

## STARTING YEARLY SALARIES OF INEXPERIENCED FULL-TIME EMPLOYED CHEMISTRY GRADUATES

by Degree: Summer 1982 and Summer 1983

Salaries	DEGREE LEVEL					
	Bachelor's		Master's		Ph.D.	
	1982	1983	1982	1983	1982	1983
90th Percentile	\$23,000	\$22,500	\$27,000	\$32,800	\$35,000	\$36,882
75th Percentile	20,475	20,000	26,000	28,625	34,000	35,000
50th Percentile	17,000	16,530	24,120	24,920	32,400	33,550
25th Percentile	14,000	14,000	19,875	17,000	30,000	29,281
10th Percentile	12,000	12,000	15,270	15,140	22,530	21,550
Mean	17,303	17,044	22,758	24,009	30,742	31,613

Table 2

## STARTING YEARLY SALARIES OF INEXPERIENCED FULL-TIME EMPLOYED CHEMICAL ENGINEERING GRADUATES

by Degree: Summer 1982 and Summer 1983

Salaries	DEGREE LEVEL					
	Bachelor's		Master's		Ph.D.	
	1982	1983	1982	1983	1982	1983
90th Percentile	\$28,810	\$28,200	\$31,950	\$32,010	\$37,940	\$40,400
75th Percentile	28,000	27,500	30,000	30,000	36,500	39,500
50th Percentile	26,700	26,100	29,000	29,250	35,000	38,000
25th Percentile	25,770	24,000	27,345	26,880	34,000	35,650
10th Percentile	23,000	20,000	25,325	24,994	30,600	26,000
Mean	26,352	25,281	28,832	28,392	34,634	36,476
Count	558	335	54	46	32	17
Standard Deviation	2,953	3,809	2,903	3,821	3,276	4,993

## POST-GRADUATION EMPLOYMENT STATUS

Besides the decreasing salaries, another sign of weak demand is that many graduates had not found any employment at all by the time of graduation. Table 3 shows that the unemployment rate is severe in chemical engineering. More than a third of those who received the bachelor's degree in chemical engineering were still unemployed when they completed the survey questionnaire.

Although unemployment is less severe in chemistry than it is in chemical engineering, even in chemistry the problem is worse than the figures in Table 3 seem to indicate. To understand the extent of unemployment among chemistry graduates requires an additional calculation. Because unemployment is defined as a fraction of the labor force, persons not seeking work (the majority of BS chemistry graduates) are neither employed nor unemployed. An accurate reading of the unemployment rate, therefore, requires removing from the denominator of the unemployment rate two groups not seeking employment: graduates who plan to attend graduate school and those not seeking full-time employment, most of whom plan to attend medical school or dental school. Performing the calculation in this way yields larger unemployment rates among recipients of the bachelor's degree: 31% in chemistry and 42% in chemical engineering.

The recent history for unemployment calculated in this way is:

	1983	1982	1981	1980
Chemical Engineering	42%	26%	8%	6%
Chemistry	31	21	23	22

## PLANS FOR ADVANCE STUDY and POSTDOCTORAL FELLOWSHIPS

In chemistry, postdoctoral fellows as a percent of new PhDs provides a rough indicator of demand. Because some of the new doctoral chemists who accept postdoctoral fellowships would have preferred full-time employment, an increase in the fraction accepting such fellowships indicates insufficient full-time employment. This year this measure of demand indicates that the climate is slightly less hospitable than it was last year: 33.7% accepted postdoctoral positions in 1983 as compared with 30.7% in 1982.

Bachelor's degree recipients' plans for advanced study are little different from those of last year's graduates. Summary of these plans appears in Tables 4 and 5.

## GRADE-POINT AVERAGES

Most persons who receive the bachelor's degree in chemistry go into graduate school or professional school, and so discussion of "typical" salaries paid to new bachelor's degree chemists requires a certain degree of caution. Nevertheless, that subject is one of intense interest to those

Table 3

POSTGRADUATION STATUS OF CHEMISTRY AND  
CHEMICAL ENGINEERING GRADUATES: SUMMER 1983

Major and Employment Status	Bachelor's	Master's	Doctorates

Number of responses	123	228

graduates who accept full-time employment as it also is to their employers. One indication of this interest is that last year several employers commented that salaries paid recipients of the bachelor's degree in chemistry are actually more than the 1982 report indicated. Perhaps these employers pay more than average salaries. If this explanation is correct, then an immediate question arises: How do they choose who will receive these premium salaries?

As part of an attempt to examine why some graduates receive salaries very much larger than others do, this year's questionnaire asked graduates several questions not included in previous years. Early in 1984 ACS Statistical Services will publish a special report analyzing these data.

Preliminary findings indicate that the analysis will include some conclusions that are far from obvious. For example, among graduates with high grades women earn more than men, whereas among graduates with average grades men earn more. Another example concerns the relationship between the salary received by a recipient of the bachelor's degree in chemistry and the highest degree offered by the department that granted that degree: Apparently, the biggest salaries go to graduates of departments that offer the master's degree but not the doctorate. A final example relates salary to both the sex of the graduate and the type of control of the school from which the woman or man graduated: among graduates of private schools men and women earn the same salaries, whereas among graduates of public schools men earn more.

## SCOPE AND METHOD

### OBJECTIVES

The 1983 Starting Salary Survey is the 32nd in the series of annual surveys now conducted by Statistical Services of the American Chemical Society. Summaries of the results of these surveys appear annually in the "Chemical Careers" edition of the Chemical and Engineering News, this year published on October 17.

The primary objective of the survey is to gather data on the starting salaries and occupational status of new chemists and chemical engineers who graduated during the 1982-83 academic year. The survey covers bachelor's, master's, and doctoral degree recipients. In addition, the survey provides information on graduates' sex, citizenship, and minority classification.

### METHOD OF COLLECTION AND TIMING OF SURVEY

Chemistry and chemical engineering departments provided names and addresses of students who graduated between September 1, 1982 and June 30, 1983. The cooperating departments were the chemistry departments approved by the ACS and the chemical engineering departments approved by the American Institute of Chemical Engineers and the Engineer's Council for Professional Development.

During the summer of 1983, ACS Statistical Services mailed questionnaires to those graduates who had U.S. addresses and graduation dates from September, 1982 through June, 1983. Summer graduates were excluded from the mailing because many of them had twelve months' experience by the time the survey was conducted.

### EXTENT OF COVERAGE

Survey questionnaires were mailed between July and September to approximately 14,000 graduates. By the cutoff date of October 28, Statistical Services had received 3,352 usable responses.

The table below contains ACS estimates of the numbers of chemistry and chemical engineering graduates in 1983.

Projected Numbers of Degrees in  
Chemistry and in Chemical Engineering, 1982-83

	Bachelors	Masters	Doctorate
Chemistry	11,700	1,720	1,680
Chemical Engineering	6,850	1,410	320

The survey respondents represent about 10.0 percent of all 1983 chemistry graduates and about 19.0 percent of all 1983 chemical engineering graduates. No effort was made to examine the characteristics of graduates from departments that did not participate in the survey or of those graduates who did not mail back completed questionnaires.

#### DEFINITIONS

The questionnaire appears at the end of this report. Responses to questions on post-graduation status were edited to eliminate multiple responses and to reflect as accurately as possible the employment status of the respondent.

The term "inexperienced" as used in the tables refers to those who have 12 months or less of prior professional work experience. Salary tables are based only on salaries of those who found full-time employment in chemistry or chemical engineering. Postdoctoral salaries are analyzed separately.

The Technical Notes present methods for estimating sampling error and also explain certain discrepancies among some of the tables.

## TECHNICAL NOTES

### DISCREPANCIES AMONG TABLES

Some pairs of tables contain totals that should be identical but are not. For example, two tables that present information about PhD respondents should show the same total number of PhDs. They might, however, show different totals. To illustrate, if one table groups the PhDs according to sex and the other groups them according to geographic region, the totals will differ unless the number who did not indicate their sex is the same as the number who did not indicate their geographic region.

### ESTIMATES OF MEDIAN SALARIES

Median salaries displayed within the cells of the salary tables are sample medians and are therefore subject to sampling error. This error may be quite large, especially when the number of respondents in the corresponding cell is small. Therefore, median salaries in cells with fewer than 15 respondents should not be used to estimate their corresponding population medians. Similarly, tables showing the 25th and 75th salary percentiles, and those showing the 10th and 90th salary percentiles, should have at least 25 respondents and 40 respondents respectively.

### COMPARING SALARIES

Often questions arise concerning women's salaries as compared with men's, or chemists' salaries as compared with chemical engineers'. These and similar comparisons require caution.

Statistical tests should be performed to determine whether observed differences in salaries of various sample groups could be mere chance occurrences resulting from peculiarities of the samples. Whether a difference in salaries is "statistically significant" depends not only on the magnitude of the difference but also on the sample sizes and the magnitudes of the sample standard deviations.

Statistical tests of significance may be found in Numerical and Statistical Techniques, by J. H. Pollard, Handbook of Tables for Probability and Statistics, published by the Chemical Rubber Company, and in other similar texts.

## ESTIMATING SAMPLING ERROR FOR PERCENTS

Percents in this report are derived from the sample. If the entire population had received and returned questionnaires, most estimates would be somewhat different. How much different? Although this question does not have an exact answer, the table below does provide some guidance. To use the table, find the column headed by the percent (p) derived from the sample, and find the row appropriate for the sample size (n). (Approximations for p and n may be used.) Note the number in that column and that row of the table.

This number from the body of the table measures the precision with which the sample percent estimates the percent of the entire population. Specifically, if this procedure is applied repeatedly, about 95 times out of 100, the population percent will differ from the sample percent by no more than the amount shown in the table.

Approximate Sampling Errors for Percents

n	p= 10% or 90%	p= 20% or 80%	p= 30% or 70%	p=40% or 60%	p= 50%
50	8.3%	11.1%	12.7%	13.6%	13.9%
100	5.9	7.8	9.0	9.6	9.8
200	4.2	5.5	6.4	6.8	6.9
500	2.6	3.5	4.0	4.3	4.4
1000	1.9	2.5	2.8	3.0	3.1
2000	1.3	1.8	2.0	2.1	2.2
5000	0.8	1.1	1.3	1.4	1.4
10000	0.6	0.8	0.9	1.0	1.0

In Table B-1 for example, 115 respondents classified as chemists indicated their highest degree as PhD, and their employment status as employed full-time in chemistry or chemical engineering. The percent of this group who are women is listed at 19.1 percent (p=19.1). A "95% confidence interval" for this percent may be approximated by taking n and p to be about 100 and 20%. The table shows an approximate sampling error of 7.8%. Hence, the 95% confidence interval is 11.3% to 26.9%. If 100 similar estimates were made at this "level of confidence," about 95 of the true population percents would be contained in their respective intervals.

## American Chemical Society

1155 SIXTEENTH STREET, N.W.  
WASHINGTON, D.C. 20036  
Phone (202) 872-4534

JOHN K CRUM  
*Executive Director*

Summer 1983

Dear Colleague:

For many years the American Chemical Society has been gathering information about starting salaries in chemistry and chemical engineering, by means of an annual mail survey of both member and non-member graduates. We believe the data gathered has been very useful to chemists and chemical engineers, particularly as they start their careers, and that the publication of such data has a beneficial effect on salary levels. Also, the surveys provide information on the employment status of recent graduates. These surveys by the Society have gained a reputation for reliability and usefulness.

We urge you to participate in this survey as a service to your colleagues and profession. Please take a few minutes now to fill out the enclosed questionnaire. No personal identification is required; the returns should be anonymous.

Please complete as many items in the questionnaire as possible, whether or not you have already accepted employment, and return it as soon as you can. We have enclosed a postage-paid envelope for this purpose.

Preliminary results of this survey will be reported this fall in CHEMICAL AND ENGINEERING NEWS' Careers Issue. A more exhaustive report will be published by the American Chemical Society later in the year.

We thank you for your help and extend our very best wishes for every success in your professional pursuits.

Sincerely yours,

A handwritten signature in cursive script that reads "John K. Crum".

John K Crum

JKC/bj

Enclosure

Survey of Starting Salaries and Employment Status of  
1983 Chemistry and Chemical Engineering Graduates

## A. Highest degree earned:

Bachelors . . . 1[]

Masters . . . 2[]

Doctorate . . . 3[]

Please skip to  
Question C.

B1. Grade Point Average  
in your major: \_\_\_\_\_  
overall: \_\_\_\_\_

Use:	A = 4.00
	B = 3.00
	C = 2.00

B2. The school that granted your degree is:  
Public . . . 1[] Private . . . 2[]

B3. Geographic location of school: State \_\_\_\_\_

B4. Highest degree offered by your department is:  
BS . . . 1[] MS . . . 2[] PhD . . . 3[]

B5. Which area of chemistry interests you most?

Chemical Engineering . . . 1[]	Organic Chemistry . . . 5[]
Biochemistry . . . . . 2[]	Physical Chemistry . . . 6[]
Analytical Chemistry . . . 3[]	Non-chemical . . . . . 7[]
Inorganic Chemistry . . . 4[]	

B6. Have you undertaken a senior dissertation project?

No . . . . . 1[]

Yes . . . . . 2[] → In what area? (Check one)

Chemical Engineering . . . . .	1[]
Biochemistry . . . . .	2[]
Analytical Chemistry . . . . .	3[]
Inorganic Chemistry . . . . .	4[]
Organic Chemistry . . . . .	5[]
Physical Chemistry . . . . .	6[]
Non-Chemical . . . . .	7[]

## C. Field of highest degree (Check one):

Chemical engineering . . . . . 1[]	Organic chemistry . . . . . 7[]
Chemistry, general . . . . . 2[]	Pharmaceutical/medicinal/clinical chemistry 8[]
Biochemistry . . . . . 3[]	Physical chemistry . . . . . 9[]
Agricultural/food chemistry 4[]	Theoretical chemistry . . . . . 10[]
Analytical chemistry . . . . . 5[]	Polymer/macromolecular chemistry . . . . . 11[]
Inorganic chemistry . . . . . 6[]	Chemistry, other . . . . . 12[]
	Non-chemical . . . . . 13[]

## D. Do you plan further advanced studies in fall 1983? (Check one):

Yes, full-time . . . 1[] Yes, part-time . . . 2[] No . . . 3[] → If "No" go to Question F.

## E. Field of further studies (Check one):

Chemistry . . . . . 1[]	Dentistry . . . . . 8[]
Other physical science, or math . 2[]	Pharmacy, pharmacology . . . . . 9[]
Chemical engineering . . . . . 3[]	Business management . . . . . 10[]
Other engineering . . . . . 4[]	Education . . . . . 11[]
Biochemistry . . . . . 5[]	Law . . . . . 12[]
Life science . . . . . 6[]	Social science, or humanities . . . 13[]
Medicine . . . . . 7[]	Other . . . . . 14[]

- F. Age: \_\_\_\_\_
- G. Sex: Male . . . . . 1[] Female . . . . . 2[]
- H. Citizenship or visa status (Check one):  
 U.S. citizen . . . 1[] U.S. permanent resident visa . . . 2[] Other visa . . . 3[]
- I. Racial or ethnic group:  
 White and not of Hispanic origin . . . . . 1[]  
 Black and not of Hispanic origin . . . . . 2[]  
 Hispanic . . . . . 3[]  
 Asian or Pacific Islander . . . . . 4[]  
 American Indian or Alaskan Native . . . . . 5[]
- J. Post-graduation employment status (Check one):  
 Accepted or continued full-time employment (excluding summer employment):  
 In a field of chemistry or chemical engineering . . . . . 1[]  
 In a field other than chemistry or chemical engineering . . . . . 2[]  
 Accepted a graduate assistantship  
 or a postdoctoral or other fellowship . . . . . 3[]  
 Not employed (or employed part-time or for the summer):  
 and seeking full-time employment . . . . . 4[]  
 and not seeking full-time employment . . . . . 5[]
- ] → STOP. Please return  
 this questionnaire in  
 the envelope provided.
- K. Professional or technical work experience prior to graduation (Check one):  
 Less than 12 months . . . 1[] 12 to 36 months . . . 2[] More than 36 months . . . 3[]
- L. How long have you been working for your current employer?  
 .12 months or less . . . 1[] More than 12 months . . . 2[] → Go to question 0.
- M. How many firm offers of employment did you receive in a field of chemistry or chemical engineering? \_\_\_\_\_ (Specify number)
- N. Which ONE of the following factors MOST influenced you to choose your present employer?  
 Highest salary offer . . . . . 1[] Best laboratory facilities . . . . . 3[]  
 Most interesting work . . . . . 2[] Best chance for advancement . . . . . 4[]
- O. Employer classification (Check the ONE category that best describes your employer):  
 Private industry or business with  
 less than 5,000 employees . . . 1[] College or university . . . . . 4[]  
 5,000-25,000 employees . . . 2[] High school or other school . . . . . 5[]  
 more than 25,000 employees . . . 3[] Government . . . . . 6[]  
 Hospital or independent laboratory . . . 7[]  
 Other . . . . . 8[]
- P. Check the ONE specialty most closely related to your employment:  
 Chemical Engineering . . . . . 1[] Organic Chemistry . . . . . 5[]  
 Biochemistry . . . . . 2[] Physical Chemistry . . . . . 6[]  
 Analytical Chemistry . . . . . 3[] Non-Chemical . . . . . 7[]  
 Inorganic Chemistry . . . . . 4[]
- Q. Annual salary: \$ \_\_\_\_\_ per year
- R. Geographic location of employment: State \_\_\_\_\_

Please return within 7 days to the American Chemical Society  
 Room 202, 1155 Sixteenth St., N.W., Washington, D.C. 20036

Thank you.
