Zach was walking home from school
And saw a sign that read:
“Come join a rocket contest,
And learn to zoom,” it said.

Zach didn’t have a rocket,
But knew that he could make
One that soared and zoomed real fast—
First prize he’d surely take.

With a bottle and a straw,
Zach zipped up to his room.
He built a flying rocket
That really had some zoom!
**ZOOMERS!**

What You'll Need:

- thin plastic coffee stirrer
- paper
- scissors
- tape
- straw
- empty dish detergent squeeze bottle (cap removed)

1. Cut out a half circle and tape it to make a cone. Leave a small opening at the tip.

2. Stick one end of the stirrer through the tip and tape it in place.

3. Place the straw into the empty squeeze bottle and hold it in place with your hand. Try to seal the opening as much as possible.

4. Place your zoom rocket into the straw.

5. Give the bottle a hard squeeze.

Watch your rocket ZOOM!

WARNING: Be careful not to point your zoom rocket at anyone!
