GOVERNMENT, POLITICS and the CHEMISTRY ENTERPRISE
Science and the Trump Administration

November 21, 2016

Mr. Donald Trump
Office of President-Elect
1600 F Street, NW
Washington, DC 20006

Dear President-elect Trump:

On behalf of the U.S. scientific, engineering, and higher education communities, we are looking forward to working with you, as 45th President of the United States, and your administration.

As President you will face a wide range of domestic and international challenges, from stimulating economic and energy security, to ensuring U.S. economic competitiveness, creating jobs, and responding to the changing needs of a diverse, aging, and more technologically focused society. The scientific community is ready to provide the scientific expertise and leadership needed to address them successfully.

For this reason, we urge that you quickly appoint a science advisor with the title of Deputy Director for Science and Technology who is a nationally respected leader with the skills and experience in engineering, science, management and policy skills necessary for this critical role.

Sincerely,

Signed by ACS and 28 other S&T organizations

2017 Global Outlook: Chemistry and the Economy
The End of Globalization?

Thursday, December 8, 2016 @ 2:00pm ET

This year will be noted for a paradigm shift in how major governments view trade. In Europe, the United Kingdom voted to remove itself from the E.U. and a similar sentiment is being expressed in other member countries. In the U.S., President-Elect Donald Trump has set the following agenda for his first 100 days in office: renegotiate or withdraw from NAFTA, withdraw from the Trans-Pacific Partnership, and label China as a currency manipulator. Join us as Paul Hodges and Bill Carroll return to take stock of the major events in 2016 and share their thoughts on how this will affect the chemical industry and the economy.
