The American Chemical Society Science & the Congress Project
and
The ACS Committee on Corporation Associates
cordially invite you to a luncheon briefing:

Energy, Water and Climate: Connecting the Dots

December 16, 2009, Noon -1:30 p.m.
2325 Rayburn House Office Building

From the minute we turn the lights on and brush our teeth in the morning, we rely on energy and water for our quality of life. These two critical resources are intimately connected: it takes energy to treat and transport water, and most power generation requires water. Climate change and other trends such as population growth are likely to affect both, as we shift to lower-carbon energy sources and many regions experience diminishing water resources. This briefing will examine current and future relationships between energy and water and the implications of a changing climate.

Moderator

Anne DeMasi, The Dow Chemical Company

Panelists

Michael Webber, University of Texas at Austin
John Gasper, Argonne National Laboratory
Heather Cooley, The Pacific Institute
Manian Ramesh, Nalco Company

Please RSVP to science_congress@acs.org. Please provide name, affiliation, phone number, and e-mail address.
