

ENERGY SCIENCES COALITION

July 22, 2019

The Energy Sciences Coalition (ESC) recommends and strongly encourages Congress to include an investment in the Department of Energy (DOE) Office of Science's research infrastructure as part of any larger infrastructure bill. Office of Science-supported research infrastructure at national laboratories and university research facilities enables scientific breakthroughs and discoveries vital to American prosperity and security.

The Office of Science supports the operation of the largest collection of major scientific user facilities in the world. Located at national laboratories and universities across the country, these 27 facilities include particle accelerators, experimental reactors, X-ray synchrotron and free-electron laser light sources, leadership-class supercomputers and other high-precision instruments. Annually, more than 36,000 researchers from academia, industry and federal agencies use these facilities to support their pursuits in science and engineering.

While the Office of Science has been an excellent steward of these world-class scientific facilities, funding constraints have kept these facilities from undergoing the modernization necessary to remain state-of-the-art. Mission-critical support facilities and utilities across the 10 Office of Science national laboratories are falling into disrepair, undermining scientific progress and making it more challenging to attract talent to our national laboratories. In addition to major user facilities, the Office of Science maintains laboratory and office buildings, support facilities and a vast network of utilities that form the backbone of each site. Currently, the average age of these buildings is 42 years and nearly half are rated as substandard or inadequate to meet mission need. In addition, utility systems across several laboratories are suffering from failures and frequent, costly repairs. DOE estimates that deferred maintenance costs across the national labs is \$741 million. An infrastructure investment would help address this problem and allow the national laboratories to focus more of their resources on scientific discovery.

Equally important, the U.S. faces increasing competition from our counterparts in Europe and Asia, as they race to build their own state-of-the-art facilities to attract the best minds and lead the world in science and technology. An additional infrastructure investment would accelerate the construction of world-class facilities and scientific instruments to stay ahead of this competition and make sure the U.S. remains the most attractive country in the world for scientific discovery and innovation. With a strong record of completing major construction projects on time and on budget, the Office of Science has been a good steward of taxpayer dollars.

Given the critical role of Office of Science infrastructure to the U.S. scientific ecosystem, ESC recommends that Congress consider the following investments in any infrastructure bill:

- ongoing line item construction projects for world-class scientific facilities;
- Science Lab Infrastructure projects, including ones that advance innovation, partnership, and commercialization activities;
- new and upgraded instruments at Office of Science user facilities and shared research facilities, including those that build on the success of the Human Genome Project between DOE and the National Institutes of Health to catalyze new collaborations in neuroscience and precision medicine;
- general purpose infrastructure;

- high-performance computing and networking infrastructure leveraging new Artificial Intelligence and Machine Learning (AI/ML) applications;
- mid-scale instrumentation for novel, state-of-the-art tools at user facilities to significantly enhance diagnostic and visualization capabilities; and
- research centers and targeted workforce investments to maintain U.S. competitiveness, such as multi-disciplinary quantum science and technology centers, quantum foundries, fellowships, and early career research programs.

Thank you for your consideration on this important topic. Targeted infrastructure investments at Office of Science-supported facilities would have a significant return on investment. In the short-term, such investments would create construction jobs and increased economic activity, while in the long-term they would spur discoveries and innovation, creating the jobs and technologies of tomorrow.

The Energy Sciences Coalition (ESC) is a broad-based coalition of organizations representing scientists, engineers and mathematicians in universities, industry and national laboratories who are committed to supporting and advancing the scientific research programs of the U.S. Department of Energy (DOE), and in particular, the DOE Office of Science.

ESC Membership

American Association for the Advancement of Science	Jefferson Science Associates, LLC
American Association of Physicists in Medicine	Krell Institute
American Association of Physics Teachers	Lehigh University
American Astronomical Society	Massachusetts Institute of Technology
American Chemical Society	Materials Research Society
American Crystallographic Association	Michigan State University
American Geophysical Union	Michigan Technological University
American Geosciences Institute	New York University
American Institute of Physics	Northeastern University
American Mathematical Society	Northern Illinois University
American Physical Society	Northwestern University
American Society for Engineering Education	Oak Ridge Associated Universities (ORAU)
American Society of Agronomy	OSA—The Optical Society
Acoustical Society of America (ASA)	Pace University
American Society of Mechanical Engineers	Penn State University
American Society for Microbiology	Princeton University
American Society of Plant Biologists	Purdue University
American Vacuum Society	Rensselaer Polytechnic Institute
Arizona State University	Rutgers, The State University of New Jersey
Association of American Universities	Society for Industrial and Applied Mathematics
Association of Public and Land-grant Universities	Soil Science Society of America
Battelle	South Dakota School of Mines
Binghamton University	Southeastern Universities Research Association
Biophysical Society	SPIE
Boston University	Stanford University
Case Western Reserve University	Stony Brook University
City College of CUNY	Tech-X Corporation
Clemson University	The Ohio State University
Coalition for Academic Scientific Computation (CASC)	University of California System
Consortium for Ocean Leadership	University of Chicago
Columbia University	University of Colorado Boulder
Computing Research Association	University of Delaware
Council of Scientific Society Presidents	University of Illinois System
Cornell University	University of Iowa
Cray Inc.	University of Maryland, College Park
Crop Science Society of America	University of Michigan
Duke University	University of Missouri System
The Ecological Society of America	University of North Texas
Florida State University	University of Pennsylvania
Fusion Power Associates	University of Rochester
General Atomics	University of Southern California
Geological Society of America	University of Tennessee
George Mason University	University of Texas at Austin
Georgia Institute of Technology	University of Virginia
Harvard University	University of Wisconsin-Madison
Health Physics Society	Vanderbilt University
IBM	Washington State University
Iowa State University	West Virginia University
	Yale University
