

UNCOVER YOUR SCIENCE STORY.

Building a story catcher is the first step in telling your science story. Use this tool to ask yourself or a friend questions that uncover science stories.

After you build your Story Catcher see what stories you'll discover — pick the question that intrigues you the most, count the letters and move your story catcher (one movement for each letter), then pick an element (use the atomic number and move the story catcher again), pick another element, and then you'll arrive at your question.
